Professional Experience

Mindfire Solutions — Senior Software Engineer

Noida, India

Jul 2025–Present

Personal Injury Case Management Platform

- Contributed to a modular monolith using backend-for-frontend, domain service, and repository layers with event-driven workflows.
- Implemented an API for grouping table data by a selected column to support grouped data rendering.
- Extended a workflow engine to automate business processes through entity-change events and rule-based actions.
- Integrated Pendo analytics to track search usage, user interactions, and feature adoption.

Intellegings — Senior Software Development Engineer 1

Chandigarh, India

Jun 2023–Jun 2025

AzamPay — Wallet Anti-Money Laundering Platform

- Built a metadata-driven, multi-tenant configuration system using .NET attributes, reflection, and MySQL, reducing client-specific code duplication and development time by 45%.
- Increased ETL processing throughput by 20× using cursor-based streaming, chunked updates, and schema-validated ingestion and transformation.
- Developed an AML rule engine using Spring Boot, JPA, CTEs, window functions, and temporary tables, reducing analysis time by 55%.

Star Health — Insurance Anti-Money Laundering Platform

- Automated application containerization and deployment across 5+ on-premises client environments using Docker and Kubernetes, reducing deployment time by 40%.
- Remediated 25+ security findings identified through vulnerability assessment and penetration testing (VAPT).
- Replaced MySQL-based search with Elasticsearch to deliver sub-second querying for AML search workflows.
- Implemented .NET middleware to encrypt POST request payloads.

FINNET2 — AML Reporting

- Built a metadata-driven UI system using backend configuration, .NET attributes, and reflection to support dynamic rendering and validation, reducing development and change cycles by approximately 35%.
- Implemented streaming-based generation of high-volume CTR and NTR reports.

Intellegings — Software Development Engineer Intern

Chandigarh, India

Sep 2022–May 2023

- Migrated the UI from Nebular to a Material component library and refactored shared components to improve consistency, maintainability, and performance.
- Developed a UI module and backend integration for a sanctions-screening API, bringing AML verification capabilities from a parallel project into the main product.

Education

GLA University

Bachelor of Technology in Computer Science & Engineering

2019–2023

Mathura, India

Technical Skills

Languages: C#, SQL, Java, TypeScript, Python

Backend: .NET / .NET Core, .NET 8, REST APIs, Entity Framework, LINQ, Spring Boot, JPA

Frontend: Angular, React

Data: SQL Server, MySQL, Elasticsearch, ETL, CTEs, window functions

Architecture: Modular monoliths, backend-for-frontend (BFF), multi-tenancy, event-driven workflows

Tools & Testing: Docker, Kubernetes, Git, xUnit, Jest, Jira
